Exam : **C2010-650**

Title : Fundamentals of Applying
Tivoli Endpoint Manager
Solutions V1

Vendor : IBM

Version : DEMO

NO.1 How is IBM Tivoli Endpoint Manager (TEM) for Security and Compliance Analytics (SCA) installed?

- A. From the TEM component installer
- B. Take action on the task Deploy and Run Security Checklist
- C. Take action on the task Download TEMA Installer, then run the setup file manually
- D. Enable the site in the License Overview Dashboard in the TEM Management Domain

Answer: C

NO.2 Which statement describes how to manually set download throttling for clients within IBM Tivoli Endpoint Manager (TEM)?

- A. Access the relay diagnostic page on the TEM server at <http://127.0.0.1:52311/rd> and modify the Client Download Speed setting.
- B. Access the TEM console, take action on the task BES Client Setting: Download Throttling, in the Action Parameter window set the Bytes/sec value, and click OK.
- C. Access the TEM console, select File > Preferences, under the bandwidth throttling section, update the Bytes/sec value for the default download throttling for clients.
- D. Access the TEM Administration Tool, select System Options, select bandwidth throttling, and update the Bytes/sec value for the default download throttling for clients.

Answer: B

NO.3 What is the purpose of the Gathering Interval drop-down menu setting in the Advanced Masthead parameters within the IBM Tivoli Endpoint Manager (TEM) Administration Tool?

- A. This option determines how often new content is replicated to relays.
- B. This option determines how often the server gathers new content for the sites.
- C. This option defines how often server replication occurs between two TEM servers.
- D. This option determines how long the clients wait without hearing from the server before they check whether new content is available.

Answer: D

NO.4 A customer has a functioning IBM Tivoli Endpoint Manager (TEM) server and has successfully deployed TEM for Core Protection Module (CPM) in their network. They want to use Trend's Web Reputation technology so that they can have real time and control to prevent Web-based malware from infecting their end users' computers. What do they need to do to get this process started?

- A. CPM does not have Web Reputation capability.
- B. Take action on the task Set URL Filtering on the end users' computers.
- C. Ensure CPM clients are at V10.6 or greater. Take action on the Core Protection Module

-
Endpoint Upgrade task.

D. Take action on the task Enable Web Reputation on the Proxy Server to enable communication between CPM and the proxy.

Answer: C

NO.5 Power Management has recently been added to the IBM Tivoli Endpoint Manager (TEM) license. What is the first step to view the site contents in the console?

- A. Launch the TEM Administration Tool and enable the site under the Masthead Management tab
- B. Choose the Power Management site from the external site listing and specifically subscribe the TEM server
- C. Choose the Power Management site from the external site listing and subscribe any Windows computer
- D. Enable the Power Management site under the License Overview dashboard within the BigFix Management domain

Answer: D

NO.6 A company has a Trend Anti-Virus environment and they have purchased IBM Tivoli Endpoint Manager (TEM) for Core Protection. What needs to occur first to begin the process of gathering the site content?

- A. Activate all 23 analysis found under the Core Protection Module in the TEM Console.
- B. Go to the license overview dashboard under BigFix Management domain and enable Trend Micro Core Protection Module, Trend Reporting.
- C. Core protection requires its own server. Review hardware requirements, build the server, and setup ODBC connections back to the TEM server.
- D. Once the Core Protection Module has been purchased, an e-mail is sent from Trend containing the necessary download links and information. Follow the e-mail instruction to download and install Trend on the TEM server.

Answer: B

NO.7 This action script is run:

```
regset "[HKEY_CURRENT_USER\Software\Test]" "testString" = "testValue"
```

In the fixlet debugger, the key gets correctly created under the HKEY_CURRENTUSER branch. However, when running the same action by targeting the IBM Tivoli Endpoint Manager (TEM) client in the TEM Console, the agent states that the action ran to completion but the same key is not there. What is the reason for this discrepancy?

- A. The TEM client reported action completion in error.
- B. Some action script commands, like regset, work only in the fixlet debugger.
- C. The fixlet debugger is more forgiving when it comes to proper action script form.
- D. The fixlet debugger runs under the users' context; the TEM client runs as LocalSystem.

Answer: D

NO.8 The IT operations team wants to install IBM Tivoli Endpoint Manager (TEM) in a network where proxy Internet access is required. The proxy requires a non-Windows credential to be entered each time the Internet is accessed. Where is this registry key set: [HKEY_LOCAL_MACHINE\SOFTWARE\BigFix\Enterprise Server\GatherService]?

- A. On the TEM server
- B. On the Top Level Relay
- C. On the Internet DMZ relay
- D. On a client with direct Internet access

Answer: A

NO.9 The Message Level Encryption feature of IBM Tivoli Endpoint Manager V8.2 (TEM) increases security but adds an additional load to the environment. What system hardware changes should be made to the TEM environment to accommodate the additional load?

- A. Add more RAM to the relays and clients
- B. Add more disk space to the TEM server and clients
- C. Add more RAM to the TEM server or decrypting relay
- D. Add more processing power to the TEM server or decrypting relay

Answer: D

NO.10 Which dashboard can be viewed to check the average number of BES Clients per relay?

- A. Systems Lifecycle
- B. Deployment Overview
- C. System Configuration
- D. Deployment Health Checks

Answer: B

NO.11 Which statement accurately describes one of the requirements for running the Client Deployment Tool for Windows?

- A. The target should have port 52311 open.
- B. The target must be in an Active Directory domain.
- C. The target must have file and print sharing services enabled.
- D. The deployment system should be any UNIX or Windows relay.

Answer: C

NO.12 Internet access must be configured through a proxy server in order for the IBM Tivoli Endpoint Manager (TEM) server to download Windows patches from the Internet. How is this accomplished?

- A. The TEM server does not need Internet access. Content can only be added manually.
- B. Configure the BES Gather Service to use a service account that has open access to the Internet.
- C. Configure specific proxy server rules only permitting the TEM clients to go to specific domains such as Microsoft.com or Adobe.com.
- D. In the Window's registry set the BES Gather Service to bypass proxy server for local address. Restart the BES Gather Service when finished so changes will take effect.

Answer: B

NO.13 How is an IBM Tivoli Endpoint Manager (TEM) client system most efficiently promoted to a relay?

- A. Manually run the reaiyinstall.exe package on the desired system
- B. All TEM clients are already relays so no additional configuration is necessary
- C. Use the relay install task from the TEM Console to install the relay on the desired system
- D. Create a fixlet using the TEM Software Distribution tool to distribute and execute the relay install on the desired system

Answer: C

NO.14 Which account should a remote console operator use to access the IBM Tivoli Endpoint Manager (TEM) Console?

- A. LDAP/AD Domain credentials
- B. TEM Masthead and password
- C. SQL Server Admin credentials
- D. TEM Private Key and password

Answer: A

NO.15 If usePre70ClientCompatibleMIME is set to false for the IBM Tivoli Endpoint Manager server, what is the recommended number of components in a baseline?

- A. <15
- B. <250
- C. <1000
- D. <2000

Answer: B
